

What is a Pipeline Partner?

Why should your organization be one?

Glad you asked! First and foremost, you are reading this because we identified you and your organizations as a great supporter of education and workforce development. Who better for us to partner with than organizations whose aim is to grow the local workforce and community?

"Education Through Experience"

Becoming a Pipeline Partner with Trades Education Center is a strategic move for school systems & non-profit organizations looking to bridge the gap between education and industry while securing several advantages for their stakeholders. By supporting Trades Education Center through raising student awareness of opportunities in the skilled trades, partners not only promote career diversity but also enjoy significant benefits.

Firstly, being a Pipeline Partner positions school systems or non-profit organizations as advocates for filling the skilled trades gap through education. This advocacy is recognized through social media platforms and in-person events, enhancing the partner's reputation and impact in the community.

Secondly, partnering with Trades Education Center creates pathways for students to explore

and enter skilled trades professions. This access to tomorrow's skilled tradesmen ensures a workforce pipeline for various industries.

Additionally, Pipeline Partners gain access to a network of Curriculum and Workforce Partners who share similar goals in advancing and supporting the trades. This network facilitates collaboration, resource sharing, and potential opportunities for students and educators.

Overall, being a Pipeline Partner with Trades Education Center is a strategic partnership that promotes career awareness, enhances community impact, and provides access to valuable networks within the trades community.
